PROJECTS

Storage Newsletter – Frontend Developer
May 2015 – June 2015

Server side: PHP, MySQL with WordPress API
Used AngularJS to visualize data generated by the WP-API and PHP as a middleware. Made effective use of Directives, Controllers, Scopes, Services, and Dependency Injection.

Roles and Responsibilities:
- Bringing a designer's concept to life with HTML, CSS and JavaScript.
- Creating tools that enhance how users see and interact with the site in any browser.
- Contributing some back-end experience, collaborating on APIs, and more.
- Developed User Interface for blog decoupled with WordPress.

Gostware – Frontend Developer
June 2015 – February 2016

Server side: PHP Laravel, MySQL
Used HTML5, CSS3, Bootstrap and AngularJS to create frontend with the data generated by the API.

Roles and Responsibilities:
- Translation of designer wireframes into AngularJS front-end.
- Implementing responsive design for web, mobiles and tablets.
- Maintaining software workflow management with a project management tools like GitHub.
- Worked on developing User Interfaces for the administrator and various users based on roles.

USTechLand – Full Stack Developer
March 2016 – April 2017

Server side: Meteor JS, MongoDB
This is a kingpin. Used Blaze, Meteor's frontend rendering system to build usable and maintainable User Interfaces for a Job portal for field jobs based in United States of America.

Roles and Responsibilities:
- Created concepts for implementing new feature requests and user stories.
- Developed User Interfaces for various types of users based on roles.
- Developed administrative console for graphically viewing number of users created and number of jobs posted/assigned/completed in a day/week/month.
- Used Dwolla's third party API to implement a payment gateway through with buyers can deposit money to post jobs and providers can withdraw money after completing a job.

Luxury Resort Properties – Frontend Developer
May 2017 – November 2017

Server side: PHP, MySQL with WordPress API.
Used Vue JS to visualize data generated by the WP-API and PHP as a middleware.

Roles and Responsibilities:
- Developed cross platform, progressive web application with Vue JS.
- Used Webpack bundler, a plug-in loader, which opens up to use NPM, which has over 80K modules.
- Leveraging browser cache to load the website even when the device is offline (website needs to be cached first when connected).

MedicOnDemand – Full Stack Developer
January 2018 – Till date

Server side: Meteor JS, MongoDB

Roles and Responsibilities:
- Created concepts for implementing new feature requests and user stories.
- Designed the application to support the multi-tenant architecture.
- Developed User Interfaces for various types of users based on roles.
- Developed an Administrator console to manage the application and clients/tenants related to the application.
- Create and manage Nginx server blocks for clients/tenants and manage deployments to these servers.

EDUCATION

Bachelor in Information Technology
MNR College of Engineering and technology – Affiliated to JNT University, Hyderabad.
May – 2013

PERSONAL INTERESTS

Apart from being a programmer, I'm pretty interested in travelling, music, cars and driving is my passion. I play guitar myself and I can't think of a better way to end my day than coming home and just strumming on my guitar for a few minutes!
